The following is an examiner's statement of reasons for allowance: Heuvel (US 6036364, figures 1-3) is closest art of record. There is no suggestion to modify the closure device of Heuvel so that the door portions 306, 310, which are hingedly attached to the main body portion 308, includes a first side surface, the first side surface being spaced apart from the main body portion when the door portion is in the open position and is adjacent the main body portion when the door portion is in the closed position as required by claims 1, 36, 50 and 64. Further, there is no suggestion to modify the closure device of Heuvel so that the main body portion 308 would include a transverse body segment arranged substantially perpendicular to the main body portion and having a pair of downwardly extending side members with an opening therebetween, the opening being sized to receive the interlocking fastening strips as required by claims 88, 116, 127 and 138. Further, there is no suggestion to modify the closure device of Heuvel so that the main body portion 308 would include a downwardly extending side leg segment disposed along a side thereof and a transverse body segment disposed at an end thereof, the side leg segment having a shoulder at a lower end thereof and the transverse body segment having a pair of spaced-apart side members with an opening therebetween as required by claims 149, 170, 176 and 182. Further, there is no suggestion to modify the closure device of Heuvel so that the slider member latching mechanism 130 would be integral with the slider member because it must be separated therefrom to extend through the apertures in the door portions as required by claims 188, 206, 224 and 242.
